Continuation of 11. does NOT place the application in condition for allowance because: Regarding claim 1, the applicant argues on pages 7-11, that Barker system does not extract information relating to the sending of the message such as the telephone number of the recipient, the date and hour for delivery. This argument is not relevant since the applicant does not claim the limitation.

The applicant further argues on page 11, that Barker system does not teach that the produced sound is only included in a message when sound content including the message is sent. This argument is not relevant since the applicant does not claim the limitation. In page 2, paragraph 0023, page 5, paragraph 0082, Barker discloses that the sender can dictate the message by speaking into a microphone and after completing the message, the message is transmitted to a playback server [i.e., storage entity]. It clearly means that the sound content being previously produced at the sender's telephone terminal without requiring connection of the telephone terminal to a remote telecommunications device. The sender types in the message the desired date and time for delivery of the message (see page 5, paragraph 0079). When the delivery time comes, the server sends the audio message to the recipient. It clearly means that the produced sound is only included in a message when sound content including the message is sent. Thus, the rejection of the claims in view of Barker and Oren will remain.

Claims 2-16 are rejected for the same reasons as discussed above.
